

Application No.: 10/713,001**Docket No.: 4459-135****AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. **(currently amended)** A liquid crystal display device, comprising:
a liquid crystal panel;
a housing disposed under the liquid crystal panel, and including a first recess, a second recess, and a protrusion area between the first recess and the second recess, wherein the protrusion area is a trapezoidal area; and
a frame coupled to the housing and having a display window for accommodating a display region of the liquid crystal panel, the frame including at least one pair of L-shaped apertures defining a first protrusion and a second protrusion,
wherein the first protrusion is bent into and engaged with the first recess, and the second protrusion is bent into and engaged with the second recess.
2. **(cancelled)**
- 3 **(original)** The liquid crystal display device as claimed in claim 1, wherein the frame is made of metal.
4. **(original)** The liquid crystal display device as claimed in claim 1, wherein the housing is made of plastics.
5. **(currently amended)** The liquid crystal display device as claimed in claim 1,

Application No.: 10/713,001Docket No.: 4459-135

wherein each of the first protrusion and the second protrusion has an ~~respectively have a~~ arm connecting to the frame and a terminal, and wherein the terminal of the first protrusion faces towards ~~[[to]]~~ the terminal of the second protrusion.

6. (original) The liquid crystal display device as claimed in claim 5, wherein the pair of L-shaped apertures are connected to each other to form a T-shaped aperture.

7. (cancelled)

8 (original) The liquid crystal display device as claimed in claim 1, further comprising a printed circuit board and a ground metal sheet, wherein the printed circuit board is disposed in the housing, and the ground metal sheet has a first terminal portion and a second terminal portion, wherein the first terminal portion contacts with the printed circuit board, and the second terminal portion is disposed above one of the first recess and the second recess and the protrusion area.

9. (original) The liquid crystal display device as claimed in claim 1, wherein the first protrusion has a first hooked terminal and the second protrusion has a second hooked terminal.

10. (original) The liquid crystal display device as claimed in claim 9, wherein the first recess is an arc-shaped recess with a first arc-shaped portion and a second arc-shaped portion coupled with the first arc-shaped portion, and the first hooked terminal is inserted between the first arc-shaped portion and the second arc-shaped portion.

Application No.: 10/713,001**Docket No.: 4459-135**

11. **(currently amended)** The liquid crystal display device as claimed in claim 9, wherein the second recess is ~~[[a]]~~ an arc-shaped recess with a third arc-shaped portion and a ~~[[forth]]~~ fourth arc-shaped portion coupled with the ~~[[first]]~~ third arc-shaped portion, and the second hooked terminal is inserted between the third arc-shaped portion and the ~~[[forth]]~~ fourth arc-shaped portion.

12. **(new)** A liquid crystal display device comprising:
a liquid crystal panel;
a housing disposed under the liquid crystal panel, and including a first recess, a second recess, and a protrusion area between the first recess and the second recess;
a frame coupled to the housing and having a display window for accommodating a display region of the liquid crystal panel, the frame including at least one pair of L-shaped apertures defining a first protrusion and a second protrusion, wherein the first protrusion is bent into and engaged with the first recess, and the second protrusion is bent into and engaged with the second recess; and
a printed circuit board and a ground metal sheet, wherein the printed circuit board is disposed in the housing, and the ground metal sheet has a first terminal portion and a second terminal portion, wherein the first terminal portion contacts with the printed circuit board, and the second terminal portion is disposed above one of the first recess and the second recess and the protrusion area.

13. **(new)** The liquid crystal display device as claimed in claim 12, wherein each of the first protrusion and the second protrusion has an arm connecting to the frame and a terminal, and wherein the terminal of the first protrusion faces towards the terminal of the second protrusion.

14. **(new)** The liquid crystal display device as claimed in claim 13, wherein the pair of

Application No.: 10/713,001**Docket No.: 4459-135**

L-shaped apertures are connected to each other to form a T-shaped aperture.

15. (new) The liquid crystal display device as claimed in claim 12, wherein the first protrusion has a first hooked terminal and the second protrusion has a second hooked terminal.

16. (new) The liquid crystal display device as claimed in claim 15, wherein the first recess is an arc-shaped recess with a first arc-shaped portion and a second arc-shaped portion coupled with the first arc-shaped portion, and the first hooked terminal is inserted between the first arc-shaped portion and the second arc-shaped portion.

17. (new) The liquid crystal display device as claimed in claim 15, wherein the second recess is an arc-shaped recess with a third arc-shaped portion and a fourth arc-shaped portion coupled with the third arc-shaped portion, and the second hooked terminal is inserted between the third arc-shaped portion and the fourth arc-shaped portion.

18. (new) A liquid crystal display device comprising:
a liquid crystal panel;
a housing disposed under the liquid crystal panel, and including a first recess, a second recess, and a protrusion area between the first recess and the second recess; and
a frame coupled to the housing and having a display window for accommodating a display region of the liquid crystal panel, the frame including at least one pair of L-shaped apertures defining a first protrusion and a second protrusion,
wherein:
the first protrusion is bent into and engaged with the first recess, and the second protrusion is bent into and engaged with the second recess, and
the first protrusion has a first hooked terminal, and the second protrusion has a second hooked terminal.

Application No.: 10/713,001**Docket No.: 4459-135**

19. (new) The liquid crystal display device as claimed in claim 18, wherein each of the first protrusion and the second protrusion has an arm connecting to the frame and a terminal, and wherein the terminal of the first protrusion faces towards the terminal of the second protrusion.

20. (new) The liquid crystal display device as claimed in claim 19, wherein the pair of L-shaped apertures are connected to each other to form a T-shaped aperture.

21. (new) The liquid crystal display device as claimed in claim 18, wherein the first recess is an arc-shaped recess with a first arc-shaped portion and a second arc-shaped portion coupled with the first arc-shaped portion, and the first hooked terminal is inserted between the first arc-shaped portion and the second arc-shaped portion.

22. (new) The liquid crystal display device as claimed in claim 18, wherein the second recess is an arc-shaped recess with a third arc-shaped portion and a fourth arc-shaped portion coupled with the third arc-shaped portion, and the second hooked terminal is inserted between the third arc-shaped portion and the fourth arc-shaped portion.
